PXI Modules

3020 Series Digital RF Signal Generators

For the very latest specifications visit www.aeroflex.com

Fully featured PXI digital RF signal generator modules for applications in communications system test

- Frequency ranges spanning 100 kHz to 6 GHz
- Level ranges -120 dBm up to +17 dBm max.
- Level accuracy ± 0.3 dB typical cw
- Analog, digital and vector modulation
- Up to 90 MHz RF modulation bandwidth
- List mode for fast switching and waveform sequencing
- Dual-channel AWG with up to 2 Gb memory
- IQCreator waveform creation software
- Data interface for digital IQ streaming
- Low phase noise typically -115 dBC/Hz at 20 kHz offset
- Versatile triggering
- Optional analog I & Q inputs and I & Q outputs
- PXI Studio Application Software

Creating high quality complex RF test signals has never been more flexible or cost effective.

The 3020 Series are compact 3U high precision PXI modular RF signal generators with integrated dual-channel arbitrary waveform generator, (AWG). Their functionality and performance are ideally matched to the needs of RF test systems for R&D manufacturing and design verification.

The 3020 Series support applications in the frequency range 100 kHz to 6 GHz, provide output power control ranging from -120 dBm to +17 dBm and support modulation bandwidths of up to 90 MHz.

Comprehensive modulation capability is provided including internal analog AM/FM modulation, digital modulation and IQ vector modulation modes. Digital modulated signals are generated from either an integrated dual channel AWG or from external digital I & Q inputs. Analog I and Q vector modulation inputs are provided as an option. Modulated RF bandwidths of up to 90 MHz are supported ideal for multicarrier or wideband signal applications. The dual-channel AWG can optionally provide differential I and Q baseband outputs simultaneously with a CW RF signal, ideally suited for testing IQ modulators. Each 3020 Series module is used together with a single slot wide 3010/3011 RF synthesizer module to provide a low phase noise, frequency agile local oscillator input.

The 3020 Series Family
PXI Studio Application Software

PXI Studio is a software application for use with all Aeroflex 3000 Series PXI modules. This highly flexible application supports vector signal generation and vector signal analysis of complex modulated signals when used with appropriate modules. The graphical user interface simplifies operation, making the 3000 Series suitable for all manner of benchtop applications. PXI Studio can also be used to control a number of signal generator modules collectively from the one user interface, ideal for multiple signal test scenarios.

Advantages of 3020 Series and PXI

The 3020 Series digital RF signal generators offer significant economies compared to other general purpose rack and stack instruments while maintaining high performance and broad functionality. In part this is achieved by exploiting the benefits of the PXI specification, an industry standard open architecture for modular instrumentation. Using PXI enables faster measurement speed, smaller size and greater flexibility for integration and future system evolution.

Applications

The 3020 Series are an essential component within any automated development or manufacturing RF test system designed around the needs of advanced digital communications standards as used in WLAN, WMAN and cellular communications, including LTE, as well as applications in satellite and terrestrial TV broadcasting and military communications. Whether the application is for measurement or system emulation, they deliver the functionality and performance required. When used in conjunction with other Aeroflex PXI RF modules, PXI chassis and system controller, complete RF test systems can be designed. The 3020 Series is complementary to the 3030 Series of RF digitizers which provide wideband high dynamic range A to D conversion of RF input signals up to 6 GHz. Aeroflex PXI modules can be supplied standalone or configured ready to go within an 8 slot PXI chassis with or without a touch screen LCD colour panel display and an embedded system controller with all software pre-installed.

Performance Highlights

Wide Frequency Range: The 3020 Series variants cover a variety of frequency ranges at different power levels with a frequency resolution as low as 1 Hz:

</table>

Low Noise: Each 3020 Series module is designed to be used with a 3010 Series RF synthesizer module with phase noise at 20 kHz offset from carrier typically -135 dBc/Hz at 50 MHz, -116 dBc/Hz at 2 GHz and -108 dBc/Hz at 5 GHz while the noise floor at 2 GHz is typically -135 dBc/Hz from 10 MHz offset.
**Frequency Agile:** For frequencies 85 MHz and below, direct digital synthesis (DDS) is used achieving frequency switching times of typically 25 µs (3020 option 02 fitted). Above 85 MHz frequency switching in typically 250 µs is achieved (3010 opt 01 fitted), making the 302xC ideal for high productivity RFIC testing or as a stimulus to frequency hopping radios.

**Frequency Settling Time 930 MHz to 1800 MHz**

**Accurate RF Level:** The output level is electronically variable in fine 0.01 dB increments from -120 dBm to a maximum level of up to +6 dBm (or 17 dBm with 3021C/3026C, see table below). An all digital levelling control loop ensures that even with complex bursty modulated signals the output signal is accurately set. Levelling control is combined with an electronic high speed RF attenuator for high reliability in volume manufacturing. High dynamic range modulated RF bursts can be generated to simulate TDMA signal characteristics as used in a variety of cellular and other wireless applications.

**Stability:** Frequency and power settings remain stable across both time and temperature variation ensuring consistent measurement results time and time again. Using the 3011’s internal OCXO 10 MHz reference, frequency stability is typically 0.01 ppm across 0 to 50 degrees C.

**IQ Digital Modulation:** High quality digital modulation is provided with I and Q bandwidths of up to ±45 MHz producing modulated RF carriers with bandwidths up to 90 MHz, ideal for testing multi channel amplifiers and applications in broadband wireless standards such as WiMAX. IQ calibration ensures that modulator carrier leakage and sideband suppression are typically <-50 dBc. Modulation linearity for UMTS W-CDMA (downlink test model 1) is better than 55 dB, more than suitable for testing mobile amplifiers. The source of modulation can be either from the internal dual-channel Arbitrary Waveform Generator (AWG), or from external digital I and Q data. The data interface can be used to stream in 14 bit digital I and Q data and associated control and timing signals.

**Analog FM and AM Modulation:** AM or FM modulation is generated from an internal sinusoidal modulation source with a frequency range 1 kHz to 50 kHz. FM deviations on 302xC can be set up to 2 MHz.

**Optional Analog I & Q Outputs and Analog I & Q Inputs:** once fitted, they can provide outputs at base band simultaneously with a CW output at RF making them ideal for testing RFIC modulators. Analog I & Q outputs from the dual-channel AWG can be set as single ended or differential. Differential output level can be set in the range 100 mV to 4 V pk with or without additional DC biasing control to ±3 V and differential offset voltage control to <± 600 mV with a limit of 6 V total EMF.

**IQ Vector Modulation:** Vector modulation from external analog I & Q sources is supported on carrier frequencies above 85 MHz with I and Q bandwidths up to ±45 MHz.

**Arbitrary Waveform Generator:** The dual-channel AWG has up to 2 Gbytes (512 Msamples) sample memory, each 32 bit sample word consisting of 14 bit I, 14 bit Q and 4 bit marker data. The AWG memory can be used to store either a single long waveform or a number of smaller waveforms up to the limit of the sample memory. Transfer of waveforms between the controller and the AWG is fast by virtue of the wide bandwidth of the PXI backplane and once loaded switching between waveforms can be almost instantaneous when using list mode. Through innovative design, the dual-channel AWG can achieve a single file playback times by incorporating a real time interpolating filter. Extending playback time still further can be achieved by sequencing the AWG files in list mode.
**Triggering and Synchronization:** The 3020 Series is equipped with a variety of triggering facilities to maximize flexibility for synchronous measurements. Trigger scenarios can be configured making it possible for different trigger events to impact different hardware responses. These can be used for a variety of simple or complex switching/control applications including addressed selection or stepped increment of RF frequency, level, AWG file, marker/trigger routing from the front panel to PXI backplane or vice versa, control of modulation on/off, RF on/off status, and RF leveling loop. Trigger sources can be via the front panel or the PXI backplane. The front panel supports triggering from a TTL input or via the data interface. The data interface can be used to supply single line or addressed triggers as well as supporting marker inputs and outputs. Similarly the 3020 Series supports PXI backplane trigger sources. Trigger inputs may be routed to the 3010 using the PXI local bus.

The front panel data interface connector provides an interface for real time digital I and Q data streaming.

**List Mode:** In list mode all internal hardware settings are pre-calculated making it possible to change settings rapidly while maintaining RF output accuracy. This feature is ideally suited for component testing or fast receiver alignment applications. List mode supports 128 combinations of different frequency and level settings.

Using list mode it is also possible to construct a sequence of different AWG waveforms. This can be used to effectively extend the sample memory and thereby create very long waveform playback times.

AWG waveform selection can be combined with frequency and level selection in list mode thus permitting all RF parameters to be configured by a new list address. This allows reconfiguration of signal generator settings in the shortest possible time and thereby accelerate test speed.

List mode supports up to 128 addresses. At each address the file can be played a user defined fixed number of times or continuously until triggered to the next sequence step. AWG sequencing is highly flexible, an AWG file play sequence can also be constructed to include periods of unmodulated or no signal output. Stepping between list address can be triggered as an immediate event or set up to wait for the current waveform file to end before playing the next file. This configuration option ensures continuous baseband generation from the AWG when sequencing through List Mode and hence can avoid switching transients being generated.

**SOFTWARE**

The 3020 Series modules are supplied with a variety of software including applications, instrument drivers and soft front panels.

**Driver Software**

All 3020 Series modules are supplied with multi layered software APIs and GUIs starting with a low level vxi pnp module driver and a single high level signal generator driver for the combination of a 3020 Series and a 3010 Series module. Each driver is supplied with a .dll interface and is supported with an associated soft front panel graphical user interface to aid manual operation and debugging during application development.

**IQCreator Waveform Creation Software**

IQCreator enables the design of a wide range of user defined or system specific complex digital modulation waveform files for use with the 3020 Series AWG. Generic capabilities include FSK, MSK, PSK and QAM modulation types with user defined symbol rates and a choice of filter characteristics. Data sources can be PRBS, fixed pattern or user defined. In addition, the user can enter deliberate IQ errors. Also included are standard waveforms and design templates for 2G, 2.5G, 3G and 4G, TDMA, CDMA and OFDMA digital cellular standards together with WLAN, WMAN and cordless telephone standards. IQCreator also supports the development of multi-tone, multi-carrier and multi-standard waveforms. For testing 3G receivers with specific C/N input levels, IQCreator permits AWGN interference to be combined with the modulation waveform. IQCreator provides graphical illustration of waveform, spectrum and CCDF characteristics.
IQCreator is a "free to download" application from the Aeroflex web site at www.aeroflex.com/IQCreator. Loading waveforms created using IQCreator into the 3020 Series module requires the enable IQCreator option 100 fitted in the module. In the absence of the enable IQCreator option, the software may still be used to package custom ASCII or BIN files, e.g. convert from MATLAB or Mathcad into the correct format for use in the AWG.

Customer Support
Users can elect to purchase PXI modules with optional warranty extensions.

Standard extended warranty provides either 36 months or 60 months warranty period plus the benefits of guaranteed product repair times in the event of failure.

Standard extended warranty can also be provided inclusive of scheduled calibration.

On request Aeroflex can provide customized premium warranty support designed around your specific needs.

SPECIFICATION

All 3020 Series specifications are defined when used in conjunction with a 3010/11 RF synthesizer PXI module and driver software supplied with the module (or later version). Specifications are included for variants 3020A, 3020C, 3021C, 3025 and 3025C and 3026C.

- 1 Hz

**FM Deviation Range**
- 10 Hz to 500 kHz

**Resolution**
- 1 Hz to 1 kHz, 10 Hz above

**Accuracy** (1 kHz mod rate)
<±3% of set deviation

**Total Harmonic Distortion** (at 1 kHz mod rate and max deviation)
<1.5% at max deviation

**DIGITAL MODULATION**

**I and Q Bandwidth (±3 dB) at RF output**

</tbody>
</table>

(1) Limited by LF breakpoint at approx. 500 kHz

**External Digital:**
As internal, but limited to ±Fs/4 by the digital interpolation filter, where Fs is the IQ sample rate.

**Residual Carrier Leak**
Typically -50 dBc above 85 MHz

(1) After warm-up and self calibration valid for temp range 5°C
IQ Image Suppression

</tbody>
</table>

Linearity

>55 dB ACPR on WCDMA signals (Downlink test model 1)
Meets IEEE 802.11a/g spectral mask with >10 dB standoff for output level <0 dBm rms

Third Order Intermodulation Distortion

3020A/3025:

(2 tones with spacing 25 kHz and level at -6 dBm per tone (<3 GHz) or -9 dBm per tone (>3 GHz)

<-50 dBc relative to each tone

3020C/3021C/3025C/3026C:

<table>
<thead>
<tr>
<th>Carrier Frequency</th>
<th>Tone spacing</th>
<th>Tone spacing (1)</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;5 GHz</td>
<td>typ -55 dBc</td>
<td>typ -50 dBc</td>

<td>typ -50 dBc</td>
<td>typ -46 dBc</td>
</tr>
</tbody>
</table>

(1) For output levels <0 dBm/tone below 3 GHz and <-5 dBm/tone above 3 GHz

Error Vector Magnitude

Below 3 GHz: typically 1.5% EVM on WCDMA signals
Typically 0.5% EVM on GSM EDGE signals

Up to 6 GHz: typically 2% EVM on IEEE 802.11a, b, g signals

ARBITRARY WAVEFORM GENERATOR

Memory

3020A/3025:

32 Msamples I Q * 14 bit + 4 markers

3020C/3021C/3025C/3026C:

Standard - 128 Msamples I Q * 14 bit + 4 markers
Opt3 - 256 Msamples I Q * 14 bit + 4 markers
Opt4 - 512 Msamples I Q * 14 bit + 4 markers

AWG File Source Data

IQCreator (requires option 100)
ASC11, 16/32 bit integer, 32 bit floating point*

*using IQCreator waveform packager to convert into a 3025 compatible format

AWG Trigger Modes:

Internal: Continuous (start/stop) & Single shot
External: Single shot and Gated
Trigger edge +ve, -ve

AWG Trigger Sources:

3020C/3021C/3025C/3026C:

Internal: AWG marker, List address, List strobe out, sequence start, RF blank
External: PXI trigger bus[0-8], start trigger, Serial local bus, TTL (SMB), LVDS

3020A/3025

As above excluding serial bus but including PXI local bus left[0-13]

302xC enhanced trigger modes

Start only; start & stop; re-trigger
Termination selection; Immediate / End of file
Trigger Edge; +ve, -ve, ANY

AWG file play count 1 to 65,535 or continuous
Trigger delay; 0 to 68 seconds resolution 4 ns

Note: AWG trigger latency approx. 520ns + (9 Sample Clocks) where 1 Sample Clock is the period of the current ARB Sample rate.

Sample Rates

3020A/3025:

14.323 kHz to 66 MHz

3020C/3021C/3025C/3026C:

10 kHz to 200 MHz
**AWG SEQUENCER**

**Number of Segments**
- 128

**Segment Type**
- AWG file, CW (Mod Off)\(^1\), RF Off\(^1\)
  \(^1\)When used in conjunction with list mode

**Number of AWG Files**
- (hosted simultaneously up to the limit of available sample memory)
  - 3020A/3025:
    - 1 to 64
    - 302xC:
      - up to 1 million, (limited to 128 when in List mode)

**Length of Segment**
- 128 samples up to limit of AWG memory

**Number of Segment Repeats**
- 1 to 4095

**Sequence Trigger Modes**
- Stepped, Single, Continuous

**Sequence Trigger Sources**
- PXI trigger bus, Star trigger, LVDS Aux 1 to 5, TTL+ve, TTL-ve, Software commanded

**AWG File Selection Time**
- AWG completion On - Seamless
- AWG completion Off - Defined by sample rate

**REAL TIME IQ INTERFACE**

**Input Level**
- LVDS (Low voltage differential signalling ANSI/TIA/EIA-644)

**Input Data**
- 14 bit IQ data + 4 markers, 5 aux

**Output Data**
- 4 markers, 5 aux, clock, IQ select

**LVDS Clock**
- External interleaved data clock required

**LVDS clock to be phase locked to 302x 10 MHz reference**

**Sampling Rate**
- 3020A/3025
  - 14 bit word rate: 28,626 kwords/s to (interleaved) 132 Mwords/s
  - IQ sample rate: 14.323 kS/s to 66 MS/s
  - Bandwidth: ±14 MHz at 66 MS/s, ±27 MHz at 90 MS/s
- 302xC
  - 3020A/3025
    - Max I and Q bandwidth: ±14 MHz at 66 MS/s, ±27 MHz at 90 MS/s
    - Max RF bandwidth: ±28 MHz, ±90 MHz
  - (a)The 0.1 dB bandwidth is Fs/4 (3021C/3026C).

**OPTION 01: ANALOG I & Q INPUTS AND I & Q OUTPUTS**

**I & Q ANALOG OUTPUTS**

**I & Q Output Level Range**
- 3020A/3025 302xC
  - Single ended into 50 Ω load: 100 mV to 4 V pk-pk
  - Differential into 100 Ω load: 200 mV to 8 V pk-pk

**I & Q Output Level Resolution**
- 100 μV

**I & Q Output Level Accuracy**
- <2% at 20 kHz, typ 1.5%, excludes termination errors

**I/Q Level Imbalance Adjust**
- ±4 dB nominal continuously variable

**Output Bias Voltage Range**
- ±3 V

**Output Bias Voltage Resolution**
- 1.5 mV

**Output Bias Voltage Accuracy\(^2\)**
- <±0.75% of set Bias, ±15 mV
  \(^2\) After warmup and self calibration

**Differential Offset Range**
- ±600 mV, differential into 100 Ω load

**Differential Offset Resolution**
- 100 μV

**Differential Offset Accuracy\(^2\)**
- <±2% ±3.3 mV max, ±1% ±0.7 mV typical
  \(^2\) After warmup and self calibration

**Differential Signal Balance**
- Typically 0.15 dB @ 10 MHz

**Frequency Response**
- 3 dB bandwidth at maximum output level
  - 3020A/3025:
    - 15 MHz
    - 302xC:
      - 45 MHz

**Spectral Purity (2 V pk-pk set voltage at 1 MHz)**
- 2\(^\text{nd}\) harmonic <–60 dBc
- 3\(^\text{rd}\) harmonic <–65 dBc
- IMD <–60 dBc (100 kHz tone spacing)

**I & Q ANALOG INPUTS**

**Input Level (for nominal set RF level)**
- 0.5 Vrms complex signal on I and Q
- 0.5 Vdc on I or Q

**Bandwidth**
- 3020A/3025:
  - >25 MHz (50 Ω only) for carrier frequencies above 375 MHz
  - 302xC:
    - As for internal digital modulation. Available for carrier frequencies above 85 MHz
**INTERFACES**

3010/11:
- LO output (SMA)
- 10 MHz reference I/O (SMAx 2)
- PCI bus interface including PXI triggering functions

3020 Series:
- RF output (SMA)
- LO input 1.5 GHz to 3 GHz, nominally 0 dBm (SMA) 50 Ω
- 10 MHz reference input for sampling clock (SMA)
- 10 MHz reference link through (SMA)
- Data IQ interface (VHDCI)
- Ext. trigger In: LVDS, TTL (SMB) or PXI
- Trigger out: LVDS or PXI
- PCI bus interface including PXI triggering functions
- I & Q In (SMB x 2) with 3020 option 01 fitted
- –I, +I, –Q, +Q Out (SMB x 4) with 3020 option 01 fitted

**POWER CONSUMPTION (TYPICAL)**

Max Power is the peak power consumption achieved and does not coincide with max current on all power rails

**GENERAL**

The following general specifications are common to the 3010, 3011 and 302x.

**RF Leakage (for carrier frequencies <3 GHz)**

<5 µV PD at the carrier frequency into a single turn 25 mm loop, 25 mm or more from the front panel

**Standard Warranty**

24 months

**Calibration Interval**

Recommended 24 months

**Electromagnetic Compatibility**

EN 61326-1:2006, Emissions Class A, Immunity Table 1

**Safety**

EN 61010-1:2001 Safety requirements for electrical equipment for measurement, control and laboratory use - Part 1, General requirements

**Driver Software**

VXIpp compliant software driver

**RATED RANGE OF USE**

**Operating Temperature**

0 to 50°C. Meets IEC-60068-2-1 and 60068-2-2

**Operating Humidity**

10 to 90% non-condensing. Meets IEC-60068-2-56

**CONDITIONS OF STORAGE AND TRANSPORT**

**Storage Temperature**

-20 to +70°C. Meets IEC-60068-2-1 and 60068-2-2

**Storage Humidity**

5 to 93% non-condensing. Meets IEC-60068-2-56

**Shock**

30 g peak, half sine, 9 ms pulse. Tested in accordance with IEC-60068-2-27

Random vibration 5 Hz to 500 Hz, 2.46 g rms non-operating. Tested in accordance with IEC-60068-2-64

**COMPLIANCE**

PXI Hardware Specification, Revision 2.2, ECN 1 Revision1.0 (Hybrid Slot-Compatible PXI-1 Peripheral Module, PXI Software Specification Revision 2.1 VXI plug & play specifications (VPP-2, VPP-3.x, VPP-4.x and VPP-7)
3010/3011 SPECIFIC SPECIFICATIONS

Specifications are common to the 3010 and 3011 unless otherwise stated.

LOCAL OSCILLATOR OUT

Frequency Range
1.5 GHz to 3.0 GHz

Resolution
1 Hz

Accuracy
As frequency standard

Output Power
Fixed level in the range -4 dBm to +3 dBm

Output Impedance
50 Ω Nominal

VSWR
<2:1

FREQUENCY REFERENCE OUT (3011 ONLY)

Level
2 V pk-pk nominal square wave into 50 Ω

Frequency
10 MHz

Aging Rate
1 in 10^8 per day 1 in 10^7 per year

Temperature Stability (0 to 50°C)
Typically better than ±1 x 10^-8

Warm-Up Time
<5 minutes
